

EIP Diagram Instructions

Print out these instructions.

1-Chose an institution of interest (in this context even individuals with a purpose can be institutions.)

2-Locate it relative to the GeoPolitical World (right side blue list) recursions and place it in the diagram.

3-Connect it to one or more GeoPolitical items with lines. These lines are directed. Start with lines originating from your institution. Label the line with an "S" if the institution supports the aliveness of the selected GeoPolitical level or an "O" if it diminished that GeoPolitical level.

4-If possible connect the institution to one or more EcoBioPhysical World recursions, again using "S" or "O" to note the direction of the institutions effect on the ecological world level.

5-Next, consider which GeoPolitical recursions support or fail to adequately support the institution. Draw directed connections from the particular GeoPoliticals to the institution and note direction of effect with "S" or "O".

6-Next, notice what EcoBioPhycical recursions effect the institution. Make the connections.

7-Consider what other institutions are needed to enhance the viability of your initiating institution. Who has the power, materials, information, access that your institution needs access to to be safe and prosperous?

8-Finally, add a couple of institutions and connect them to your institution and to the relevant recursions (GeoPolitical and EcoBiological).
